

PUBLIC SUMMARY | TIN INGOT

Indonesian Tin Ingot

Tin ingot (timah batangan) from Bangka-Belitung and Riau Islands processing areas: grades and quality checks, delivery and payment, export rules, deal process

Reference

APEX-SN-INGOT-PUB-2026-0929-EN

Date of issue

29 September 2026

Nature

Public summary · non-binding

SUMMARY

- The product is Indonesian tin ingot (timah batangan): smelted metallic tin, not tin ore or slag.
- Two grades are offered: Grade A (Sn 99.85% min., standard grade for manufacturing) and Grade B (Sn 99.90% min., Bangka and Riau Islands processing areas). LME-registered brands are outside the scope.
- Pricing is based on LME Tin; specific terms are agreed after site verification and mill certificate review.
- Every deal starts with site verification. We do not ask for any advance payment before verification is complete.
- Export is conditional. If all six export requirements are not in place, the contract is made on Indonesian domestic delivery terms.

1 Grades and specification

Grade	Min. purity	Description	Origin	Offered
Grade A	Sn 99.85%	Standard tin ingot for manufacturing	Indonesia	Yes
Grade B	Sn 99.90%	Tin ingot from processing areas	Bangka / Riau Islands	Yes
LME brand	Sn 99.90%	LME-registered brand tin ingot	—	Excluded

Grade B and LME brand lines share the same purity figure and cannot be told apart by number alone. Grade B here is not LME-registered brand material. The contract names a single grade.

2 Quality checks

Grade is confirmed by the mill certificate of each lot. Impurity limits are not fixed by the grade description, so once we have your end use (e.g. solder, plating) and required specification, we identify lots that meet it.

Check	Detail	When
Sn content	Meets the minimum purity for the grade	Site verification / pre-shipment
Impurity limits	Pb, Fe, Cu, Bi, As limits and lot results	Site verification / pre-shipment
Lot identity	Mill certificate lot number matches ingot marks and labels	Site verification
Net weight	Weighbridge net weight of the lot (packaging excluded)	Site verification / delivery
Surveyor report (LS)	Designated surveyor's pre-shipment inspection (for export)	Before shipment

3 Delivery and payment

Item	Detail
Domestic delivery	Loaded at the smelter or delivered to a warehouse named in the contract. Documents: mill certificate, weighbridge ticket, delivery receipt
Export	Only when all export requirements in section 4 are met. Incoterms and port set in the contract. Documents: CI, PL, mill certificate, B/L, surveyor report (LS), export approval (PE), certificate of origin if required
Price basis	LME Tin (USD per tonne). Delivery terms written as a separate clause from price
Payment	Export: irrevocable sight L/C. Domestic: to the IUP holder's corporate account named in the contract
Settlement	Weighbridge net weight and confirmed assay; packaging weight excluded
Payee rule	No advance before site verification. We never pay to or receive into personal or intermediary accounts.

4 Indonesian export requirements

Tin ingot is a strategic mineral with its own export procedure. All six items below must be in one file at the same time before shipment. If any is missing, we contract on domestic delivery terms without FOB or a bill of lading.

Requirement	Detail
Exchange sale	Sale executed on the domestic tin exchange (ICDX / JFX)
PE (export approval)	Persetujuan Ekspor for the relevant HS code
LS (surveyor report)	Laporan Surveyor: pre-shipment inspection of the lot
IUP holder	The exporter of record holds the mining business licence (IUP)
RKAB	Approved annual work plan and budget with remaining approved volume
PNBP	No arrears on royalties or other state revenue

A new commodity exchange, Icomex, launched in September 2026 with tin as its first listing (trading targeted for January 2027). Contracts covering deliveries from 2027 should include a clause for the exchange transition.

5 Deal process

Six stages. Before Stage 02 site verification is complete we do not fix quantity, take payment or write export clauses. This protects the buyer from deals where the cargo and title have not been verified.

STAGE 01 Pre-deal Required spec, NDA, delivery route	STAGE 02 Site check Seller and IUP, physical lot, net weight, certificates	STAGE 03 Terms Price terms, term sheet, firm offer	STAGE 04 Contract Export checks, SPA, payment instrument	STAGE 05 Delivery Domestic delivery, or exchange, PE and LS then shipment	STAGE 06 Settlement Weight and assay confirmed; final settlement
--	--	--	--	---	--

Stage 02 (highlighted) is the site verification PT. APEX TELCOM INKO carries out in Indonesia.
