

PUBLIC SUMMARY | TIN SMELTING SLAG

Indonesian Tin Smelting Slag

SLEK · terak timah · tin smelting slag: specification, inspection and payment, export permit route, deal process

Reference	Date of issue	Nature
APEX-SN-SLEK-PUB-2026-0929-EN	29 September 2026	Public summary · non-binding

SUMMARY

- The product is tin smelting slag (SLEK) from the Bangka-Belitung region of Indonesia. Its product class, permits and pricing differ from tin ingot and tin ore.
- Target grade is Sn 5.00–15.00% on final assay, delivered in jumbo bags of 1–2 tonnes each.
- We recommend payable-metal settlement on the final assay. Price and formula are fixed in the contract after joint weighing, joint sampling and final assay.
- Export follows the industrial waste (B3) route with Basel Convention prior informed consent (PIC), not the mineral export route. No deposit is taken and nothing ships before the import country's permit is in place.
- Payment is per lot after delivery, weighing and final assay. Personal accounts are never used.

1 Specification

Item	Detail
Product	Tin smelting slag (SLEK / terak timah)
Grade	Sn 5.00–15.00% on final assay. Below Sn 5.00%: rejection or agreed discount
Form, packing	Jumbo bags, 1–2 tonnes each. Powder and brick (block) forms are different specifications, offered separately
Moisture, foreign matter	Moisture 3% max., foreign matter 2% max. Excess moisture deducted from settlement weight
HS code	Reviewed under 2620 (metal-bearing slag). Final code matched to the invoice once the export form is set
Excluded	Tin ingot (HS 8001) and tin ore are not covered by this summary

Three earlier samples assayed Sn 5.0–9.2% (SNI 13-6348-2000). Sample results do not guarantee shipped lots; the grade of each lot is set again by witnessed weighing and joint sampling. Sample certificates and site photos are provided after an NDA.

2 Export route and permits

Item	Detail
Route	Industrial waste (B3) export with Basel Convention prior informed consent (PIC)
Import country (buyer)	Waste import permit or written consent required. No deposit and no shipment before it is in place
Export country (Indonesia)	Notification to the environmental authority and transport documents. Exporter of record named in the contract
Lead time	Can take several months even with both sides working in parallel. Permit review time is not treated as a breach
Note	Non-hazardous waste codes (e.g. B1100) are not applied as-is to slag of this grade. Pressing into bricks does not remove it from the B3 route

3 Delivery, inspection and payment

Item	Detail
Delivery	Overland delivery in jumbo bags to a designated site in Indonesia. For export, import country, port and Incoterms are set in a contract annex after permits are in place
Weighing, sampling	Witnessed weighbridge weighing. Joint sampling from at least 10% of bags, samples split in three, umpire sample kept 90 days
Assay	Independent laboratory agreed by both parties. Disputes referred to SGS or Intertek; tolerance 0.5 percentage points
Price settlement	Payable-metal settlement recommended. Fixed price per grade band only if both parties choose it in writing
Payment	Per lot, remitted within 5 bank business days after delivery, weighing, final assay and documents. No personal accounts
Deposit	As a rule, no deposit before the import permit and export notification are received

4 Deal process

Six stages, each starting only after the previous one is complete. No deposit is taken and nothing ships before Stage 02 permits are secured.

STAGE 01 Reply Quantity, form, delivery, settlement, permit plan	STAGE 02 Permits Import permit or consent, export notification, exporter named	STAGE 03 Contract Payable formula, quantity, delivery, inspection, payment	STAGE 04 Weighing Witnessed weighing, joint sampling, split samples	STAGE 05 Delivery Local delivery or shipment on the permit route	STAGE 06 Settlement Final assay, net weight, payment per lot
--	--	--	---	--	--

Stage 02 (highlighted) is the precondition for any deposit or shipment.
